Cross-Platform Cryptocurrency Wallet

ABOUT PROJECT

It is a digital wallet allowing users to pay and receive payments in multiple cryptocurrencies and conventional currencies as well.

SOLUTION

With our previous experience in the custom blockchain development for different financial institutions, we were able to set up a reliable transaction system with the following features:

- Support of all possible currencies;
- Complete security in all monetary transactions;
- Application operation on all major contemporary devices and operating systems;
- Fast transactions between individuals and services;
- Safety of funds and personal data - all communications between a device and servers are encrypted with the strongest commercially available algorithms.
- No third-party verification service to fight money-laundry and fraud.

OUTCOME

4+ months
Project Duration

5 people
Project Team

INDUSTRY

- Fintech
- E-commerce

TECHNOLOGY

- Angular 6
- MongoDB
- Stellar
- AWS
- Amazon EC2
- Amazon CloudFront
